1.INTRODUCTION

The rapid growth of the internet and e-commerce platforms has transformed the way people purchase goods and services. Online shopping has become increasingly popular because of its convenience, time-saving nature, wide variety of products, attractive discounts, secure payment methods, and doorstep delivery. With just a few clicks, consumers can compare prices, read reviews, and purchase products anytime and from anywhere. As a result, online shopping has become an integral part of daily life for people of all age groups, especially students and young adults.

Although online shopping offers numerous advantages, excessive and uncontrolled shopping behavior can lead to online shopping addiction. Individuals may develop a habit of making unnecessary purchases due to flash sales, limited-time offers, social media advertisements, influencer marketing, or emotional factors such as stress, boredom, loneliness, or excitement. Over time, this behavior may negatively affect financial management, emotional well-being, academic or work performance, family relationships, and overall quality of life.

The purpose of this survey is to understand the online shopping habits, purchasing behavior, and addiction levels among individuals. It aims to identify how frequently people shop online, the amount they spend, the reasons behind their purchases, and the influence of advertisements, discounts, and digital marketing on their buying decisions. The survey also explores whether online shopping affects budgeting, savings, mental well-being, productivity, and everyday activities.

The findings of this study will help provide a better understanding of the causes and effects of online shopping addiction. It may also create awareness about responsible shopping practices and encourage individuals to make informed purchasing decisions. The data collected through this survey will be used **only for academic and research purposes**. All responses will remain **strictly confidential**, and participants' identities will not be disclosed. Your honest and valuable responses are greatly appreciated, as they will contribute to the success and accuracy of this research. Thank you for taking the time to participate in this survey.

2.OBJECTIVES

The objectives of this survey are:

- To understand online shopping habits.
- To identify the frequency of online shopping.
- To analyze monthly spending on online shopping.
- To identify factors influencing purchase decisions.
- To study the impact of online shopping on spending behavior.

3.SCOPE OF THE STUDY

This survey focuses on understanding the online shopping habits of respondents. It analyzes shopping frequency, preferred shopping platforms, spending patterns, buying behavior, and factors that influence online shopping decisions. The study helps in understanding consumer behavior and promotes responsible shopping practices.

4.RESEARCH METHODOLOGY

Research Design	: Descriptive survey
Survey Tool	: Google Forms
Method of Data Collection	: Online Questionnaire
Number of respondents	: 80
Number of questions	: 10
Target Respondents	: General public
Data Analysis Tool	: Google Forms Charts and Percentage Analysis

5.SURVEY QUESTIONNAIRE

1. Age.
2. Gender.
3. Name.
4. How often do you shop online?

5. Which platform do you use most for online shopping?
6. Do you think online shopping has become addictive?
7. What motivates you to shop online?
8. Is online shopping affects your savings?
9. Do you feel excited when receiving online orders?
10. Do you think you can reduce your online shopping habits, if needed?

6.RESPONSE ANALYSIS

This response analysis is based on the data collected through the online survey conducted using Google Forms. A total of respondents participated in the survey by answering questions related to their online shopping habit, preferences, and opinions about online shopping addiction.

Question No.1: Age

Responses Analysis:

The above chart represents the age distribution of the respondents who participated in the survey. Among the total respondents, 63.7% belong to the 18-25 years age group, making it the largest category. 22.5% of the respondents belong to the 26-35 years age group, while 7.5% are below 18 years and 6.3% are above 36 years.

The findings indicate that many of the participants are young adults, who are the most active users of online shopping platforms. Since this age group is more familiar with smartphones, digital payments, and e-commerce applications, their opinion provides valuable insights into online shopping habits and addiction.

Question No.2: Gender

Responses Analysis:

The chart illustrates the gender distribution of the respondents. 95% of the respondents are female, whereas 5% are male.

This indicates that female respondents have shown greater participation in the survey. As females constitute most of the sample, behavior, preferences, and opinions regarding online shopping addiction.

Question No.3: Name

Responses Analysis:

This question was included only to identify responses. It is not considered for statistical analysis

Question No.4: How often do you shop online?

Responses Analysis:

The above chart shows the frequency of online shopping among the respondents. 55% of the respondents stated that they rarely shop online, while 37.5% shop monthly. Only 6.3% shop weekly, and a very small percentage reported shopping daily.

This analysis indicates that although online shopping is common, most respondents purchase products only, when necessary, rather than making frequent purchases. The low percentage of daily and weekly shoppers suggests that most respondents maintain controlled shopping habits.

Question No.5: Which platform do you use most for Online Shopping?

Responses Analysis:

The chart shows the preferred online shopping platforms among respondents. 43.8% prefer Meesho, making it the most popular platform. 35% use Flipkart, while 18.8% prefer Amazon. Only a very small percentage use Myntra and Instore for online shopping.

The findings suggest that respondents prefer platforms that offer affordable prices, attractive discounts, and a wide variety of products. Meesho appears to be the most preferred platform because of its budget-friendly pricing and frequent promotional offers.

Question No.6: Do you think online shopping has become addictive?

Responses Analysis:

The chart shows respondents' opinions regarding online shopping addiction. 41% selected "Maybe", 32.5% selected "No", and 26.3% selected "yes".

This indicates that a large proportion of respondents are uncertain whether online shopping has become addictive. However, more than one-fourth believe that online shopping can become addictive due to factors such as frequent discount, easy accessibility, and continuous promotional notifications.

Question No.7: What motivates you to shop online?

Responses Analysis:

The chart illustrates the factors that motivate respondents to shop online. 56.3% of respondents stated that the variety of products is the main reason for online shopping, while 33.8% are motivated by discounts and special offers. A small percentage mentioned advertisements and personal necessity as influencing factors.

The findings reveal that consumers prefer online shopping because they can access a wider range of products compared to physical stores. Attractive discounts and promotional offers also play a significant role in influencing purchasing decisions.

Question No.8: Is online shopping affecting your savings?

Responses Analysis:

The chart represents respondents' opinions regarding the impact of online shopping on their savings. 41% answered "No", 38.8% answered "Yes", 20% selected "Maybe".

The analysis shows that while many respondents believe their savings are not affected, a considerable percentage feel that online shopping reduces their savings due to unnecessary or impulsive purchases. This suggests that financial management plays an important role in controlling online shopping expenses.

Question No.9: Do you feel excited when receiving online orders?

Responses Analysis:

The chart shows respondents' feelings when receiving online orders. 52.5% answered "Sometimes", 30% answered "Always", 15% answered "Rarely", and only a very small percentage selected "Never".

This indicates that receiving online orders generally creates a positive emotional response among respondents. The excitement associated with order delivery may encourage repeat purchases and increase engagement with online shopping platforms.

Question No.10: Do you think you can reduce your online shopping habits, if needed?

Responses Analysis:

The chart illustrates respondents' confidence in reducing their online shopping habits. 42.5% believe they can reduce their shopping habits easily, while another 42.5% believe feel they can reduce them with some effort. Only 7.5% consider it difficult, and 7.5% believe it is very difficult.

This analysis suggests that many respondents believe they have control over their online shopping behavior. Although a small percentage may find it challenging to reduce shopping habits, most participants are confident that they can manage their purchasing decisions when necessary.

7.FINDINGS

The major findings of the survey are as follows:

- 1.The majority of respondents (63.7%) belong to the 18–25 years age group, indicating that young adults are the primary users of online shopping platforms.
- 2.95% of the respondents are female, showing that female participants formed the majority of the survey sample.
- 3.Most respondents (55%) reported that they rarely shop online, while 37.5% shop monthly. This indicates that online shopping is generally used only when required.
- 4.Meesho (43.8%) is the most preferred online shopping platform, followed by Flipkart (35%) and Amazon (18.8%).
- 5.A large number of respondents (41.3%) believe that online shopping may become addictive, while 26.3% agree that it has become addictive.
- 6.Variety of products (56.3%) is the main factor motivating respondents to shop online, followed by discounts and special offers (33.8%).
- 7.Most respondents (41.3%) believe that online shopping does not significantly affect their savings, while 38.8% feel that it does have an impact.
- 8.More than half of the respondents (52.5%) stated that they sometimes feel excited when receiving online orders, indicating a positive emotional attachment to online shopping.

9. Most respondents (85%) believe that they can reduce their online shopping habits either easily or with some effort if required.

8.SUGGESTIONS

Based on the findings of the survey, the following suggestions are recommended:

- Prepare a monthly budget before making online purchases.
- Purchase products based on need rather than attractive offers or discounts.
- Compare prices and product reviews before placing an order.
- Avoid impulsive buying during festival sales and promotional events.
- Limit the time spent browsing shopping applications.
- Track monthly online shopping expenses to manage personal finances effectively.
- Create awareness about responsible online shopping among young consumers.
- Use online shopping platforms wisely and avoid unnecessary purchases.

9.CONCLUSION

The survey concludes that online shopping has become a popular and convenient method of purchasing products, especially among young adults. The majority of respondents prefer online shopping because of the wide variety of products, convenience, and attractive offers. Although most participants do not shop frequently and believe they can control their shopping habits, a considerable number of respondents feel that online shopping has the potential to become addictive and may affect personal savings if not managed properly.

Overall, the survey indicates that online shopping offers several benefits; however, consumers should practice responsible spending, avoid impulse buying, and maintain financial discipline to ensure a healthy shopping experience.

10.REFERENCES

The preparation of this survey report was supported by information collected from reliable and authentic sources related to online shopping, consumer behavior, and digital purchasing trends. Various online resources, research articles, and official websites were referred to in order to understand the concept of online shopping addiction, its causes, effects, and the factors influencing consumer purchasing behavior. These sources helped in developing the survey questionnaire and understanding the background of the study.

In addition to the secondary sources, the primary data for this report was collected through a structured questionnaire created using Google Forms. The responses received from the participants formed the basis for the analysis, findings, and conclusions presented in this report. Every effort has been made to ensure that the information included is accurate, relevant, and based on the data collected during the survey.
